Veljan flange mounted Check Valves VC5V, B-design series are direct operated BALL type design suitable for mounting directly on the delivery port of Veljan Vane Pumps or any SAE-61/SAE-62 port. These valves can be used in conjunction with Veljan VR5V/VR5U pressure control valves in stack formation. VC5V check valves are designed for use up to 6000 psi pressure and are available with a choice of 7.1, 14.2 and 28.4 PSI (0.5, 1.0 & 2.0 bar) cracking pressure springs in each size.

VC5V - B design check valves used in conjunction with VR5U unloader valves have an additional port X for providing the pilot to the VR5U valve. These check valves have zero leak from port-B to port-A and full flow in the opposite direction above the cracking pressure.
