

Thermowells

Solid Machined, with Flange

Thermometers

per International Standard • Model SI400F

Application

The thermowells model SI400F are flange-fitted into the process. They are suitable for high process loads, that might occur as a result of flow, temperature and process pressure influences or vibrations. These thermowells are used for mechanical thermometers as well as for electrical thermometers.

Standard features

Thermowell material

Stainless steel 316L, 316Ti

Flange

per ASME B16.5 with sealing face Form RF or Form RTF

Nominal diameter

1", 1 ½", 2"

Pressure rating

150 lbs, 300 lbs, 600 lbs, 900 - 1500 lbs

Instrument connection

Female thread ½ NPT, G ½

Bore size

Ø 6.6 mm, Ø 8.5 mm

Insertion length U,

inch: 4, 7, 10, 13, 16, 22
equivalent approx. mm: 100, 180, 255, 330, 405, 560

Total length L

Insertion length + 2 ¼"

Maximum process temperature ¹⁾

600 °C with thermowell material stainless steel 316Ti

Maximum process pressure (static) ¹⁾

150 bar with thermowell material stainless steel 316Ti

Optional extras

- Other dimensions and materials
- Coating of wetted parts
- Armour plating with STELLIT®
- Quality certificates
- Wake frequency calculations according to ASME / ANSI PTC 19.3 or to Dittrich / Klotter are recommended in critical applications. WIKAI offer this as an engineering service.

Following process data are necessary for the calculation:

- Process pressure (in bar or psi)
- Process temperature (in °C or °F)
- Flow rate (in m/s)
- Density (in kg/m³)
- Dimensions and material of thermowell

1) Ratings depends on below parameters:

- Process medium
- Process pressure and temperature
- Flow rate
- Design of thermowell (dimensions, material)

Dimensions

- H₁ Bore depth for female thread
- H₂ Length of female thread
- L Total length
- N Instrument connection
- T Connection length
- U₁ Insertion length
- Ø d₁ Bore size
- Ø F₂ Root diameter of thermowell
- Ø F₃ Tip diameter of thermowell
- Ø F₄ Diameter at instrument connection
